NOWRA Design Course Overview - Part 1

NOWRA has developed 7 courses in the critical area of design of decentralized systems. These courses lay the groundwork for design and will be expanded over the next several years. This national training course with five different instructors includes various formats including video guided PowerPoint presentations, videos, technical documents, and internet links to associated materials.

The students set their own pace for training and can either take the 10-hour class in its entirety or break it into smaller sections based on how many hours they need or their interest. The hours assigned for each section are based on the time it took others who piloted the material to complete the course, and the theoretical time it should take to go through the materials. Even though everyone learns at a different pace, it should always take participants the amount of credit hours offered and may take longer. The Design curriculum is made up of the following courses which can be taken as an entire bundle, in smaller bundles or as individual courses.

Course Name	General CEUs	Select CEUs.					Course Link
		Basic	Advanced	Inspector	OSE	Perc. Tester
